## SUMMARY

Experienced Backend developer skilled in, RESTful APIs, PostgreSQL, web security (JWT, OAuth2), and unit testing. Proficient in Python, Django, FastAPI, Jinja, AWS, Celery, Redis, and Docker.

## EXPERIENCE

### Backend Developer, Scorport – Remote

December 2023 – Present

- Designed and developed scalable RESTful APIs using Django REST Framework to enable seamless integration
- Developed a custom Content Management System within the Django admin panel, empowering non-technical users to update landing page content without engineering support which led to reducing dev involvement by 85%.
- Implemented OAuth2-based authentication and secure social login via Google and Facebook
- Built and containerized the project using a multi-stage Dockerfile that reduced environment-related bugs by 60%
- Integrated Stripe with advanced subscriptions, proration, and webhook workflows, automating unpaid user recovery and reducing churn. Developed middleware to enforce feature access based on user usage plans and preventing unauthorized feature usage
- Promoted code quality through peer reviews, test-driven development practice, debugged using ELK
- Automated demo data creation on user signup by integrating Celery-based background tasks, improving onboarding experience and maintaining fast user registration performance

### Backend Developer, Maestro Studio – Baku, Azerbaijan

July 2023 – Feb 2024

- Built a production-ready website using Django REST Framework, enabling seamless backend integration
- Implemented secure user authentication using JWT tokens
- Integrated third-party payment APIs to build secure payment, supporting transactions and subscriptions
- Boosted site performance by implementing pagination, Redis-based caching, and database query optimization
- Containerized the application using Docker, ensuring consistent deployment across development, staging, and production environments
- Integrated 1C APIs to streamline accounting, invoicing, and inventory synchronization for business automation

### Backend Developer Intern, Perkskit – Baku, Azerbaijan

Feb 2023 – July 2023

- Built RESTful APIs using Django REST Framework for seamless integration with frontend apps
- Wrote and maintained unit tests covering API endpoints, models, and views, improving code reliability
- Diagnosed and resolved backend issues through methodical debugging and troubleshooting, improving system stability
- Developed an OTP system using Celery to asynchronously send emails, improving UX during authentication
- Collaborated in Agile teams, participating in daily stand-ups and sprint planning
- Followed clean code principles and maintained adherence to coding standards
- Contributed to on-time project delivery, balancing speed and quality in a fast-paced startup environment

## PROJECTS

### Sci-hub DOI Finder Chrome Extension

[github.com/tamk1n/sci-hub-doi-finder](https://github.com/tamk1n/sci-hub-doi-finder)

- A Chrome extension that finds Digital Object Identifier (DOI) links of journal articles

## EDUCATION

ASOIU – MS in Nanotechnology

July 2023

BHOS – BE in Engineering

July 2021

## SKILLS

**Python:** Django, Django Rest Framework, FastAPI, Flask, Celery, Pydantic

**Database:** PostgreSQL, MongoDB, Redis

**CI/CD, Devops:** Docker, Nginx, Gitlab Actions

**Testing/Logging:** Unittest, Pytest, Postman, Swagger, Elasticsearch, Kibana & Logstash

## LANGUAGES

**English** – Upper Intermediate
